

1. **NO SEAM(s)** locations are determined at the time of sale. The responsibility of seam placement is determined by the project manager using the gathered template information, and by the limitations of the raw material.

All final seam locations are determined by the production manager; He takes all the information that reflects your custom seam location. Please note that the following list is what reflects and determines your seam location. Suggestions can be made by the designer and/or homeowner and will be taken into consideration

1. Your actual kitchen layout.
2. The size of slab material chosen.
3. Type of sinks you may select.
4. Accessibility of job site location and size of finished material.
5. The actual fabrication sizes after templating.
6. Pattern or flow of material.

If seam location is critical, we offer a full rendering of the layout done for \$150.00. This service is done after the template is complete. A rendering will be sent to you direct by email for your approval. If for any reason this is not acceptable, you will be charged for another slab design layout and this will delay your installation date.

Ultimate Granite takes pride in all phases of the fabrication process, not just in the seams. We reserve the right to place seams at our discretion and will take into account, pattern and flow to achieve the best possible appearance.
